ITxPT
Information Technology for Public Transport

Deploying standardised,
interoperable and cost-efficient
IT architecture

www.itxpt.org

In 20 years, ITSs have become critically important to public transport, greatly contributing to the operational performance of travel, safety, and customer experience quality.

The Information Technology for Public Transport Association fosters the adoption of a Plug-and-Play IT architecture, through the deployment of standards and best practices.

Federating the whole value chain of public transport stakeholders, ITxPT provides integration and testing platforms allowing the verification of modules' compatibility under actual operating conditions.

Public Transport authorities and operators can confirm that their IT architectures are consistent as a whole, by ensuring that modules from different suppliers work well together in Plug & Play mode.

The ITxPT platform is the unique integrated European IT platform to specify, test, qualify and showcase IT solutions. The ITxPT platform is hosted in the centre of Paris offering an easy access to all European PT stakeholders.
