

4PT joins ITxPT as Principal Member

Since 2020 4PT has been a dedicated company, with focus on providing ITxPT certified hardware and software/firmware to operate in accordance with the ITxPT standards.

Currently we provide Vehicle gateways called Hub's and TFT monitors. Our Platforms are open and supplied with software and firmware to help system integrators to a fast track to market.

Our units are supplied with full setup to connect to our cloud service "ADBIT", which is a ready to use API giving full access and control of the products.

The Hub family comes with preinstalled libraries to operate the following ITxPT services:

- ✓ Time service
- ✓ GNSS Service (based on the build in ADR GPS)
- ✓ MQTT broker
- ✓ FMStoIP
- ✓ VehicleToIP
- ✓ Inventory service

The Automatic dimmed TFT Monitors are available in master configuration with built-in player (x86) or simple configuration without player. All monitors have advanced power supply ready for installation directly to the battery power network in the vehicle. Ignition and battery low inputs are provided on all models. The mechanical design on all models is all aluminum – anodized black - with all corners rounded for passenger safety. Front glass is antiglare treated 3 mm hardened glass.

Sizes available are: 18,5", 21,5", 37" stretched and 48,5" stretched

The master Monitors are - like the Hub's - equipped with software to connect to ADBIT Cloud and comes with a ready to use demo player.

All our product has E5 approvals, and the Hub family carries R118 certification.
